

A network diagram is overlaid on the text. It consists of numerous circular nodes in purple, red, orange, and yellow, connected by thin lines of the same colors. The nodes are scattered across the text, with some forming clusters and others connected by long, thin lines that span across different lines of text. The lines and nodes appear to be highlighting specific words or phrases within the paragraph.

The search term describes relatively large natural bodies that revolve in orbits around the Sun or other stars. The term does not include small bodies such as comets, meteoroids, and asteroids, many of which are little more than pieces of ice or rock. The ones that orbit the Sun are part of the solar system, which includes the Sun and all the bodies that circle it. The one on which we are living is called earth.
