

```
public static int compute(int a, int b) {  
    int result = a * b;  
    for(int i = 1; i <= a * b; i++){  
        if(i % a == 0 && i % b == 0){  
            result = i;  
            break;  
        }  
    }  
    return result;  
}
```
