

A network diagram is overlaid on the text. It consists of numerous circular nodes in various colors (purple, pink, red, orange, yellow, grey) connected by thin, semi-transparent lines of corresponding colors. The nodes are scattered across the page, with some forming clusters and others acting as bridges between different parts of the network. The lines vary in opacity, creating a web-like structure that spans the entire text area.

The search term describes relatively large natural bodies that revolve in orbits around the Sun or other stars. The term does not include small bodies such as comets, meteoroids, and asteroids, many of which are little more than pieces of ice or rock. The ones that orbit the Sun are part of the solar system, which includes the Sun and all the bodies that circle it. The one on which we are living is called earth.
