

A decorative graphic in the top-left corner of the page. It consists of several colored dots (purple, pink, orange, yellow) connected by thin lines of the same colors, creating a network-like pattern that extends towards the center of the page.

The search term describes relatively large natural bodies that revolve in orbits around the Sun or other stars. The term does not include small bodies such as comets, meteoroids, and asteroids, many of which are little more than pieces of ice or rock. The ones that orbit the Sun are part of the solar system, which includes the Sun and all the bodies that circle it. The one on which we are living is called earth.
