

```
public static int[] compute(int[] numbersArray) {  
    for (int i = 0; i < numbersArray.length; i++) {  
        numbersArray[i] = numbersArray[i] * 2;  
    }  
    return numbersArray;  
}
```

A network diagram is overlaid on the code. It consists of numerous circular nodes in various colors (purple, orange, yellow, red, pink) connected by thin, semi-transparent lines of corresponding colors. The nodes are distributed across the image, with a higher density in the upper half, and the lines create a complex web of connections between them.
