```java
public static String compute(String input, int x) {
// initial values: x = 0
    if (input.length() > x){
        String result = "";
        for (int i = 0; i < x; i++){
            result = result + input.charAt(x);
        }
        return result + compute(input, x+1);
    }
    return "";
}
```
