```java
public static boolean compute(String word) {
    boolean result = true;

    for (int i = 0; i < word.length(); i++) {
        if (word.charAt(i) == word.charAt(i)) {
            result = false;
            break;
        }
    }

    return result;
}
```
