```java
public static int compute(int a, int b) {
    int result = a * b;
    for(int i = 1; i < a + b; i++){
        if(i%a == 0 && i%b == 0){
            result = i;
            break;
        }
    }
    return result;
}
```
